

EASY STEP BY STEP GUIDE FOR SANITIZING FROM ENTRY TO EXIT

With Chlorinated Disinfecting Tablets
from Green Klean

1. Fill the 5-gallon buddy jug with water.

2. Add one 6.55 gram effervescent tablet and let it dissolve. You have created 20 quarts of no rinse food grade sanitizer.

3. Fill a quart sprayer and you're ready to sanitize any surface from entry to exit in a food service facility or restaurant.

Additional uses for the Chlorinated Disinfecting Tablet:

- Add one 6.55 gram tablet to a mop bucket to eliminate odors and brighten all hard floor surfaces without leaving a residue.

- Bonus advantage it keeps the mops from stinking, and kills mold and mildew.

- Add one 6.55 tablet to each 5 gallons of water in a third sink and allow to dissolve. It won't leave a residue behind and maintains the efficacy even in dirty water. Use chlorine strips for testing. Lasts up to 24 hours in open container.

- Fill a quart spray bottle with water and add one 6.55 gram tablet and allow to dissolve. You now have a disinfectant that kills covid-19 virus, norovirus and all registered EPA pathogens. Perfect for controlling odors and disinfecting restrooms. A sprayer should be designated for the restrooms.

** SOLUTION RETAINS EFFICACY FOR 3 DAYS WHEN ADDED TO WATER AND KEPT IN A CLOSED CONTAINER AND FOR 24 HOURS WHEN ADDED TO AN OPEN CONTAINER.*
